

# SWING TIPS

## WIND

Playing in windy conditions can be physically taxing and causes frustration for most of us. You will hear phrases such as “when breezy, swing easy” and “don’t swing too hard”. If you tend to hit the ball high, you will be more prone to the effect of the wind. If you have any side spin in your shots, such as slicing the ball, you will be more prone to the wind. If you can swing at  $\frac{3}{4}$  of your normal power or even feel like you are **decelerating** a bit, you will suffer the wind effects much less.

Outdoor lessons and club fittings are in full swing now! [April Swing tip "Trouble Shots"](#)
